## It's Go Time!

TeeHee HaLow was designed to literally “plug and play.” Simply attach the included antenna, then connect power and data cables.

TeeHee HaLow units sold by DOT LOL, INC. ship pre-paired and will automatically bridge any attached devices with an active Ethernet connection.

### **AP vs. Client**

One of your units will have a gray circular sticker on both the box and chassis that denotes the access point (AP).

The AP should be mounted on your focus station or DIT cart, or any other central location that has a control surface.<sup>1</sup>

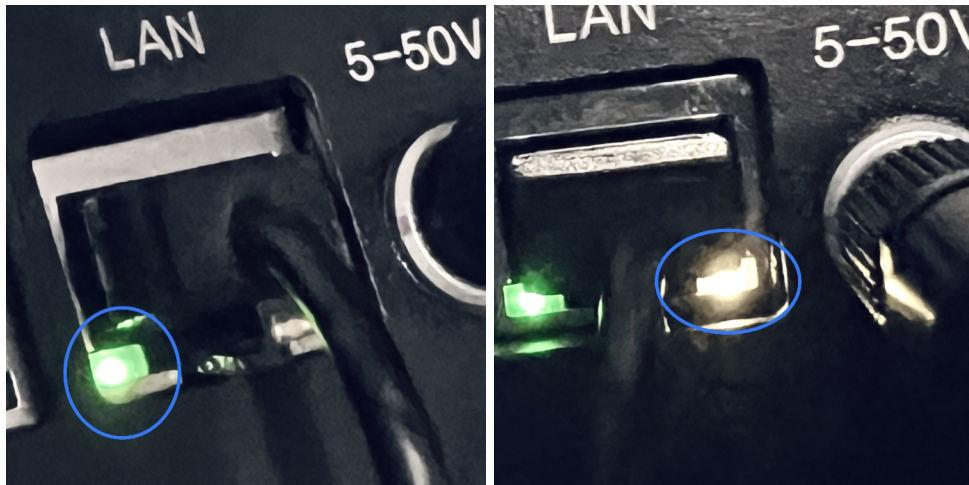

### **Startup**

After waiting 30 seconds for TeeHee HaLow to boot, any devices connected to the RJ45 ports on TeeHee HaLow will connect wirelessly. You can confirm physical connection by

---

<sup>1</sup> While it doesn't matter where the AP is located with only two units, as you add more units, the AP should be attached to a centrally-located device so it can maintain connections to any additional units.

monitoring TeeHee HaLow's green and yellow status lights integrated within the respective RJ45 port.

### **Static vs. DHCP**

TeeHee HaLow plays well with any network—or none at all. If you have an existing network with a router and DHCP server configured, TeeHee HaLow will just wirelessly bridge any devices within your IP scheme as if they had physical RJ45 cables connected. If you have no existing network, you can just set your device's IP addresses to be static. The following settings are a simple example:

Computer or mobile device: 10.100.100.5  
Camera or other client: 10.100.100.100  
Subnet mask (all devices): 255.255.255.0

For simplicity's sake, additional clients can be added at 10.100.100.101, 10.100.100.102 and so on. You can, of course, also create your own custom IP address scheme, if desired.

### **That's It!**

While TeeHee HaLow has a virtually unlimited amount of possible configurations, you're not required to go beyond this Quickstart Guide. If you'd like to customize your configuration, you can access your AP unit's web GUI at 10.101.101.100. For more information, please review the full [Welcome Guide](#).

## Appendix I: TeeHee HaLow Configuration Files

### **Quickstart Configuration Files**

As of October 2024, all TeeHee HaLow units assembled by DOT LOL, INC. ship with one of the following configuration files, which enable this Quickstart Guide:

[Quickstart AP US](#) (the unit labeled with a gray dot)

[Quickstart Client US](#)

TeeHee HaLow units that ship as part of the same order from makeyourown.lol are paired before shipping to make the unboxing experience literally “plug and play.” If you purchase additional units, they will be configured as clients and automatically attach to your existing TeeHee HaLow units as long as your SSID credentials don’t deviate from the defaults.
